git_commits:

1. **summary:** MINOR: Add StorageTool as specified in KIP-631 (#10043)
message: MINOR: Add StorageTool as specified in KIP-631 (#10043) Add StorageTool as specified in KIP-631. It can format and describe storage directories. Fix a bug in ``ZkMetaProperties#toString``.
Reviewers: David Arthur <mumrah@gmail.com>

github_issues:**github_issues_comments:****github_pulls:**

1. **title:** MINOR: Add StorageTool as specified in KIP-631
body: Add StorageTool as specified in KIP-631. It can format and describe storage directories.

github_pulls_comments:**github_pulls_reviews:**

1. I know it's correct, but this just looks strange to me. Maybe we could do something like: ```` if size == 1
print "Found log directory:" else print "Found log directories:" ````
2. Do we always return zero if we don't throw? What's the use of this return value?
3. Is this producing JSON? If so, should we use a JSON encoder instead?
4. It doesn't produce JSON (for example, keys and values are not quoted). This is intended for human consumption. It will show up in the command-line output.
5. ok
6. It's mainly for consistency with ``infoCommand`` which does sometimes return 1. But I don't feel that strongly about it.
7. ok, sounds good
