1. **summary:** CLOUDSTACK-3009: Fix resource calculation CPU, RAM for accounts. (#3012)
message: CLOUDSTACK-3009: Fix resource calculation CPU, RAM for accounts. (#3012) The view "service_offering_view" doesn't include removed SOs, as a result when SO is removed, the bug happens. The PR introduces a change for resource calculation changing "service_offering_view" to "service_offering" table which has all service offerings. Must be fixed in: 4.12 4.11 Fixes: #3009

github_issues:

1. **title:** BUG: Account Resource Count is incorred when removed Service Offerings used
body: <!-- Verify first that your issue/request is not already reported on GitHub. Also test if the latest release and master branch are affected too. Always add information AFTER of these HTML comments, but no need to delete the comments. -->
ISSUE TYPE <!-- Pick one below and delete the rest --> * Bug Report ##### COMPONENT NAME <!-- Categorize the issue, e.g. API, VR, VPN, UI, etc. --> ~~~ Management Server ~~~ ##### CLOUDSTACK VERSION <!-- New line separated list of affected versions, commit ID for issues on master branch. --> ~~~ 4.11.1 ~~~ ##### CONFIGURATION <!-- Information about the configuration if relevant, e.g. basic network, advanced networking, etc. N/A otherwise --> Basic Networking, Domain ROOT/users, user: user ##### OS / ENVIRONMENT <!-- Information about the environment if relevant, N/A otherwise --> Ubuntu 16.04 Server ##### SUMMARY <!-- Explain the problem/feature briefly --> When you use in the account VM with SO removed, its resources are not accounted. Maybe specific only for accounts inside domains, but unsure. Bug found for env with domains. The bug was found when our engineer developed the feature for CSUI. Maybe DOs also affected somehow. ##### STEPS TO REPRODUCE <!-- For bugs, show exactly how to reproduce the problem, using a minimal test-case. Use Screenshots if accurate. The bug is important as it breaks the resource allocation/calculation model which can be used for billing purposes. For new features, show how the feature would be used. --> 1. admin: create an account. 2. admin: create SO which the account may use. 3. user: create VM with the SO. 4. admin: request account resource counters (correct). 4. admin: remove SO. 5. admin: request account resource counters (incorrect). <!-- Paste example playbooks or commands between quotes below --> ~~~ ~~~ <!-- You can also paste gist.github.com links for larger files --> ##### EXPECTED RESULTS <!-- What did you expect to happen when running the steps above? --> ~~~ Resource calculation must be correct even when VMs with removed SOs are used. ~~~ ##### ACTUAL RESULTS <!-- What actually happened? --> <!-- Paste verbatim command output between quotes below --> ~~~ Resources are calculated incorrectly. VM is accounted in VM count, but RAM and CPU is not accounted. ~~~

github_pulls_comments:

1. I think you should change the view to include this even when it is deleted, instead of changing the joining table/view. What do you think?
2. **body:** @rafaelweingartner potentially it could lead to many bugs. I think the change could some other places to fix. Now it's a small fix, but can transform into a large one.
label: code-design
3. Can you explain further why (your concerns)? I mean, if logically the result is the same when finding the physical interface, why would this affect other places?
4. @rafaelweingartner it's not thst issue. It's for resource accounting.
5. Ops, I was with the other issue in the cache... Sorry ;) Let me load this one out of the HDD again...
6. **body:** Ok, I looked in the code, and the table is used in some other places, specially the `ServiceOfferingJoinVO`. Therefore, the impacts might be big. It makes sense to use the `service_offering` if it has everything you need in that context.
label: code-design
7. @rafaelweingartner may we add to 4.11.3 as well?
8. Sure, but then the process is a little bit different. You need to target 4.11 branch. This will require you to cherry pick your current commit into 4.11.
9. @rafaelweingartner Ok. then I leave this one too? Or close this one and open for 4.11?
10. Actually, you can keep using this one. You only need to change the target branch here, and then update your `bws:bug/accounting-bug-3009` branch to use 4.11 + the commit introduced here
11. @rafaelweingartner Ok. Got it. I'll try. Not a git pro, thought...
12. Ping me on Slack if you get lost.
13. @rafaelweingartner Please, take a look. Looks like I managed it.
14. Looks like Jenkins is unhappy with moving merge branch from master to 4.11.
15. It is a coincidence. It was not a problem because of the changes, but rather a worker that was working as it should.
16. @bws what happened with this PR? I mean, there are now a lot of docker files, and other things that are not related to the change I reviewed.
17. @rafaelweingartner I want to write additional E2E tests for the code. Thus, I started with Marvin and improved the Dockerfile for the simulator to fit Marvin development needs. It's a WIP work. Please, take a look at the email list for details.
18. @rafaelweingartner Sorry about that)
19. @rafaelweingartner please review again, @borisstoyanov please review smoke test implemented.
20. @blueorangutan package
21. @rhtyd a Jenkins job has been kicked to build packages. I'll keep you posted as I make progress.
22. Moved to 4.11.2.0 as it sounds like a critical business issue if resource counts are wrong.
23. Packaging result: `centos6` `centos7` `debian`. JID-2425
24. @blueorangutan test
25. @rhtyd a Trillian-Jenkins test job (centos7 mgmt + kvm-centos7) has been kicked to run smoke tests
26. Nevermind, I needed to run test quickly - have implemented minor fixes.
27. Trillian test result (tid-3164) Environment: kvm-centos7 (x2), Advanced Networking with Mgmt server 7 Total time taken: 23884 seconds Marvin logs: <https://github.com/blueorangutan/acs-prs/releases/download/trillian/pr3012-t3164-kvm-centos7.zip> Intermittent failure detected: /marvin/tests/smoke/test_deploy_virtio_scsi_vm.py Intermittent failure detected: /marvin/tests/smoke/test_internal_lb.py Intermittent failure detected: /marvin/tests/smoke/test_resource_accounting.py

jira_issues_comments:

1. This blocker/ critical was created before July please review and resolve, we are approaching 4.2 code freeze in 7 days
2. This error is logged when Network usage command is sent when the VR is rebooting. This is a corner case. Command is sent only to the VRs in up state, but the state changed in this case before it was executed. Network usage stats collection is also not impacted since the answer is ignored.
3. Closing the issue as per Kishan comments

30. Commit f6e600e4d8134dd317ec8444ccf259285932dd50 in cloudstack's branch refs/heads/4.11 from Bitworks LLC [<https://gitbox.apache.org/repos/asf?p=cloudstack.git;h=f6e600e>] CLOUDSTACK-3009: Fix resource calculation CPU, RAM for accounts. (#3012) The view "service_offering_view" doesn't include removed SOs, as a result when SO is removed, the bug happens. The PR introduces a change for resource calculation changing "service_offering_view" to "service_offering" table which has all service offerings. Must be fixed in: 4.12 4.11 Fixes: #3009
