1. **summary:** Python loopback throws spurious errors on shutdown
description: These errors don't appear to actually cause any problems, but they are misleading. Looks like we're trying to stop subprocesses even when there _are_ no subprocesses.
ERROR:grpc._server:Exception calling application: u'1-1' Traceback (most recent call last): File "/usr/local/lib/python2.7/dist-packages/grpc/_server.py", line 434, in _call_behavior
response_or_iterator = behavior(argument, context) File "/usr/local/lib/python2.7/dist-packages/apache_beam-2.17.0.dev0-py2.7.egg/apache_beam/runners/worker/worker_pool_main.py", line 126, in StopWorker worker_process = self._worker_processes.pop(stop_worker_request.worker_id)
KeyError: u'1-1'
label: code-design
