

git_comments:

1. insert two rows
2. update index pk column and covered column
3. verify that two rows added after index was created were also added to the index table
4. create an expression index

6. verify that the rows in the index table are also updated
7. verify that the correct results are returned
8. insert row
9. verify all rows in data table are present in index table
10. * * Adds a row to the index data table * * @param i * row number
11. Insert two more rows to the index data table
12. since a.date1 and b.date2 are NULLABLE and date is fixed width, these expressions are stored as DECIMAL in the index (which is not fixed width)
13. verify only one row was updated in the data table
14. run select query with expression in WHERE clause
15. verify that the query does a range scan on the index table
16. insert two rows

18. upsert should succeed
19. divide by zero should fail
20. i2 should be used since it contains s3||'_'||s4 i
21. insert row
22. * * Adds a row to the index data table * * @param i row number
23. i2 cannot be used since s4 has been dropped from the view, so i1 will be used
24. **comment:** TODO figure out why this " " is needed
label: code-design
25. make sure that the tables are empty, but reachable
26. add another row
