

**git\_comments:**

1. Use the same logic as in `o.n.editor.GlyphGutter.update()`.
2. Defined in `DocumentView` in `editor.lib2`
3. do not use monospaced font, just adjust fontsize
4. NOI18N NOI18N

**git\_commits:**

1. **summary:** [NETBEANS-404] Have the font size in the Javadoc popup follow the editor zoom level, and avoid rendering Javadoc in monospace font only.  
**message:** [NETBEANS-404] Have the font size in the Javadoc popup follow the editor zoom level, and avoid rendering Javadoc in monospace font only.

1. **summary:** Javadoc popup is poorly rendered  
**description:** This is a patch for the old issue 236403 with the same name, see [\[https://netbeans.org/bugzilla/show\\_bug.cgi?id=236403\]](https://netbeans.org/bugzilla/show_bug.cgi?id=236403) . Since about NetBeans 7.4, the Java editor's Javadoc popup has been rendered with an all-monospace font. There have also been various complaints about the Javadoc's font size (which the monospace font "fixed" because the monospace font looks larger at the same point size). The attached patch makes the Javadoc popup once again use a non-monospace font (as in generated Javadoc HTML), while at the same time increasing the font size to match the editor's own zoom level. See the attached screenshot.
2. **summary:** Javadoc popup is poorly rendered

**jira\_issues\_comments:**

1. I just redid the patch as a github pull request. I also verified that there are no problems under the Darcula L&F (avoiding reintroducing bug [231808|[https://netbeans.org/bugzilla/show\\_bug.cgi?id=231808](https://netbeans.org/bugzilla/show_bug.cgi?id=231808)]).
2. As far as I saw your PR has been merged to master.
3. Yup--thanks!
4. Closed as the issue has been resolved more than 180 days.
