1. **summary:** Make new systemvm appliance compatible to 4.0 systemvm template
description: With CLOUDSTACK-1066 we worked on a new cooler way of generating systemvm appliances and exporting them for various hypervisors, even got a jenkins job to automate that for master (<http://jenkins.cloudstack.org/job/build-systemvm-master/>). The issue is to fix the definitions and postinstall scripts etc. to make sure these appliances are actually usable with KVM, Xen and VMWare. The task is to make them compatible and replace-able wrt 4.0 systemvm template.

13. Commit 0b07bc974a9b5ac2ab650f1c99f3c317768c9970 in branch refs/heads/master from [~bhaisaab] [<https://git-wip-us.apache.org/repos/asf?p=incubator-cloudstack.git;h=0b07bc9>] CLOUDSTACK-1340: Remove any shared folders, don't install legacy grub Signed-off-by: Rohit Yadav <bhaisaab@apache.org>
14. Commit 512c16f48357c179a19e73bec57a7c914762bc47 in branch refs/heads/master from [~bhaisaab] [<https://git-wip-us.apache.org/repos/asf?p=incubator-cloudstack.git;h=512c16f>] CLOUDSTACK-1340: Do two rounds of vhd export, from raw to fixed to dynamic Signed-off-by: Rohit Yadav <bhaisaab@apache.org>
15. Tested and worked for me on DevCloud using the hyperv-vhd image with basic zone deployment etc. The VHD image from VBox maybe compatible with Xen, I've asked Xen folks about this. Closing on the account that we've a working systemvm appliance that works, preceeds, patches with systemvm.iso and runs agents.
16. **body:** Commit 0f30c1e6b0ca97090be820ab14c8fd9308138caf in branch refs/heads/master from [~bhaisaab] [<https://git-wip-us.apache.org/repos/asf?p=incubator-cloudstack.git;h=0f30c1e>] CLOUDSTACK-1340: Fix typo in variable in build.sh Signed-off-by: Rohit Yadav <bhaisaab@apache.org>
label: documentation
17. Commit 26edb3c0aa0b2a2015c3804ed29533c33f3ec976 in branch refs/heads/master from [~bhaisaab] [<https://git-wip-us.apache.org/repos/asf?p=incubator-cloudstack.git;h=26edb3c>] CLOUDSTACK-1340: Just take the first of results, query and remove shared folders Signed-off-by: Rohit Yadav <bhaisaab@apache.org>
18. Commit b55f5898d536b27034643684a42885996a821c66 in branch refs/heads/master from [~bhaisaab] [<https://git-wip-us.apache.org/repos/asf?p=incubator-cloudstack.git;h=b55f589>] CLOUDSTACK-1340: Exit script if exporting fails for any disk format Signed-off-by: Rohit Yadav <bhaisaab@apache.org>
19. Commit 34b37ef8ed35731b0cfed0cf6cb07ea48b89b96f in branch refs/heads/master from [~bhaisaab] [<https://git-wip-us.apache.org/repos/asf?p=incubator-cloudstack.git;h=34b37ef>] CLOUDSTACK-1340: Compress QCOW2 for KVM As suggested by Marcus, by compression qcow2, we end up having smaller

disk image. I'm still archiving the qcow2 as bz2 because our installation manual still ask users to cloud-install-sys-tmpl which expects a *.qcow2.bz2 Signed-off-by: Rohit Yadav <bhaisaab@apache.org>

20. Commit bb2c7dc7284fe1887be209b18813df72d96edbbb in branch refs/heads/master from [~bhaisaab] [<https://git-wip-us.apache.org/repos/asf?p=incubator-cloudstack.git;h=bb2c7dc>] CLOUDSTACK-1340: Fix grub2 cfg to boot without waiting, fix locale Thanks to Marcus for testing and helping on KVM template, adding locale fix as per Marcus's suggestion. Tested with latest build on my local vbox. Signed-off-by: Rohit Yadav <bhaisaab@apache.org>
