1. **summary:** Document produce-wikipedia-raw-data.sh in hello-samza tutorial  
**description:** As part of SAMZA-235, we should document the hello-samza tutorial with usage on the produce-wikipedia-raw-data.sh script. This should not replace the current way we do things in the tutorial; it should just be offered as an alternative if you are unable to connect to the internet from your YARN grid.

**jira\_issues\_comments:**

1. **body:** 1. Instead of putting too much information into existing Hello Samza tutorial, added one sentence in Hello Samza tutorial pointing to a separating tutorial. 2. In the separating tutorial, give the introduction of testing connection, running the script and a little explanation. 3. Added the new page link in tutorial index. No RB since it's straightforward. Let me know if I need to change something or put it into RB. Thank you.  
**label:** documentation
2. +1 merged and committed. Sorry for the delay!
