1. **summary:** [pom cleanup] Do a pass with dependency:analyze; remove unused and explicitly list the dependencies we exploit
description: Do a pass over our poms. They are sloppy including unused jars and not listing actually used dependencies. Undo 'required' dependencies like junit and mockito; not all modules need these anymore. This cleanup motivated by failures up on jenkins where a build step is not finding transitive includes; explicit mention is needed (See failures in HBASE-18674).

1. **body:** .001 Do a pass with dependency:analyze; remove unused and explicitly list the dependencies we exploit Remove the parent dependencies set which had junit, mockito, log4j, and findbugs annotations. Listing in parent set meant these libs were dependencies for all modules which in practice was not the case. Edited all modules so those that need any from this parent set now do explicit listing. Ran the dependency:analyze over the project. Acted on most suggested removals and requests for explicit listing. Some grey areas remain around transitives that come in with hadoop --needs better excludes, another project-- and that the dependency:analyze tool is not always accurate in its reporting.

3. .002 Missed some junit and mockito includes.

4. **body:** +1, nice pom clean up [~stack]. I applied the patch locally, it builds. Compared the before and after output of command: "mvn dependency:analyze". Though there are a few warnings still present, patch cleaned up allot.

14. Reopening for addendum. Still holes in dependency. See latest runs of HBASE-18674
15. Here is an addendum that comes of wrestling maven dependency:analyze, hadoop exclusions and study of failures over on HBASE-18674. Lets see what this is like. Cycle will be commit addendum, run HBASE-18674, find more holes, commit more here... but hopefully I got it this time.
16. **body:** .addendum More explicit includes of dependencies (and removal of unused) in hbase-backup, hbase-mapreduce, and in hbase-rest.

24. Reopen. HBASE-18674 still fails. This time it can't find the JspC that is used internally by ant task. We purge JspC transitive includes from hadoop everywhere Poking around, a pretty recent bundling of JspC is in glassfish. It is what jetty suggests on this page:
<http://www.eclipse.org/jetty/documentation/9.4.x/jetty-jspc-maven-plugin.html> Our ant hackery doing precompile needs modernizing. I tried updating it but the mapping is not clean so leaving it as is for now. Here is the error I get from HBASE-18674. I cannot reproduce this stuff locally though I try running the yetus commands locally (maybe if I redo the whole yetus build...) main: [mkdir] Created dir: /testptch/hbase/hbase-rest/target/hbase-webapps [copy] Copying 1 file to /testptch/hbase/hbase-rest/target/hbase-webapps [INFO] ----- [INFO] BUILD FAILURE [INFO] ----- [INFO] Total time: 3.768s [INFO] Finished at: Mon Sep 04 04:35:22 UTC 2017 [INFO] Final Memory: 32M/913M [INFO] ----- [ERROR] Failed to execute goal org.apache.maven.plugins:maven-antrun-plugin:1.8:run (generate) on project hbase-rest: An Ant BuildException has occured: taskdef class org.apache.jasper.JspC cannot be found
25. .005 is addendum2. Adds include of a lib that has jspc in it for the antrun jsp precompiles. Also adds to hbase-it a reference to shaded hbase-protocol. See HBASE-18674 for the failures that are showing these holes on build box (Cannot repro. locally).

27. The TestCanaryTool was because of HBASE-18736; an addendum just applied should fix it. Going to push this second addendum.
28. Pushed addendum 2 to master and branch-2 (addendum 2 == .005 patch).
29. 31. Ok. Fixes for HBASE-18674 are complete. The last addendum done here seems to have fixed dependency issues for now. Leaving resolved.
32. Thanks [~stack] for fixing this and unblocking HBASE-18674!
33. [~appy] found a problem where I undid hbase-server's depdency on hbase-resource-bundle.
