1. **summary:** Upgrade commons-compress version to 1.19
description: As described in [CVE-2019-12402|https://nvd.nist.gov/vuln/detail/CVE-2019-12402], {{commons-compress:1.18}} has an issue where certain inputs may cause an infinite loop which leads to a denial of service attack. This patch simply upgrades {{common-compress}} versions from 1.18 to 1.19 which is the latest minor version at the date of filing this issue ([Maven repo|https://mvnrepository.com/artifact/org.apache.commons/commons-compress]).

jira_issues_comments:

1. **body:** This is my first time submitting a patch to an Apache project, and I apologize in advance for not strictly adhering to all the rules that I may have overlooked. I would like to figure out 'Affects Version/s' and 'Fix Version/s' (and other required labels), and it would be great if someone could point me to a right direction. A wiki page, a guideline, or anything like that would be a great help. Thanks.
label: documentation
2. Hi [~shortbread] , thanks for your contribution! You can find most of the details in [https://cwiki.apache.org/confluence/display/Hive/HowToContribute] including the Jira Guidelines. Feel free to assign the ticket to yourself, and then you can use the Submit a patch button to resubmit your code and run the required unit tests.
3. Here are the results of testing the latest attachment:
https://issues.apache.org/jira/secure/attachment/12984122/HIVE-22374.2.patch {color:red}ERROR: {color} -1 due to no test(s) being added or modified. {color:green}SUCCESS:{color} +1 due to 17545 tests passed Test results: https://builds.apache.org/job/PreCommit-HIVE-Build/19167/testReport Console output: https://builds.apache.org/job/PreCommit-HIVE-Build/19167/console Test logs: http://104.198.109.242/logs/PreCommit-HIVE-Build-19167/ Messages: {noformat} Executing org.apache.hive.ptest.execution.TestCheckPhase Executing org.apache.hive.ptest.execution.PrePhase Executing org.apache.hive.ptest.execution.YetusPhase Executing org.apache.hive.ptest.execution.ExecutionPhase Executing org.apache.hive.ptest.execution.ReportingPhase {noformat} This message is automatically generated. 4. Here are the results of testing the latest attachment:
https://issues.apache.org/jira/secure/attachment/12984122/HIVE-22374.2.patch {color:red}ERROR: {color} -1 due to build exiting with an error Test results: https://builds.apache.org/job/PreCommit-HIVE-Build/19168/testReport Console output: https://builds.apache.org/job/PreCommit-HIVE-Build/19168/console Test logs: http://104.198.109.242/logs/PreCommit-HIVE-Build-19168/ Messages: {noformat} Executing org.apache.hive.ptest.execution.TestCheckPhase Tests exited with: Exception: Patch URL https://issues.apache.org/jira/secure/attachment/12984122/HIVE-22374.2.patch was found in seen patch url's cache and a test was probably run already on it. Aborting... {noformat} This message is automatically generated. ATTACHMENT ID: 12984122 - PreCommit-HIVE-Build

5. Regarding the [second comment from Hive QA|<https://issues.apache.org/jira/browse/HIVE-22374?focusedCommentId=16960428&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-16960428>], the error message states that: `{code}` Tests exited with: Exception: Patch URL <https://issues.apache.org/jira/secure/attachment/12984122/HIVE-22374.2.patch> was found in seen patch url's cache and a test was probably run already on it. Aborting... `{code}` In such case, I suppose I don't have to take any further action, right?
6. Normally you'd have to reattach, as this step performs some codechecks/validations, but since this is just a minimal version bump and the tests passed, I'd doubt there's anything needed.
7. tests already passed for 2.patch, so +1
8. [~shortbread]: could you please provide your email which is assigned to your apache jira account? (needed for commit author)
9. [~abstractdog], it's suminb@gmail.com.
10. pushed to master, thanks [~shortbread] for the patch!
