

**git\_comments:**

1. Produce a tests jar so that avatica-server/pom.xml can reference for suite. TODO: remove after moving over to annotation-based TestSuite definitions.
2. Make sure that there are no dependencies on other calcite modules, or on libraries other than Jackson.
3. Sorted by groupId, artifactId; avatica dependencies first.
4. Apache 18 has 2.10.3, need 2.10.4 for [MJAVADOC-442].
5. We support guava versions as old as 14.0.1 (the version used by Hive) but prefer more recent versions.
6. Tell Maven that it's OK that we're not attached to the parent directory
7. override default version 2.8 for access to additional config settings

1. **summary:** Move Avatica into its own git repository  
**description:** Move Avatica into its own git repository.

**jira\_issues\_comments:**

1. Here are the details of what I think we would need to do and what would fundamentally change in our current workflow: \* Push {{HEAD}} from calcite.git to calcite-avatica.git \* {{git rm}} all of the children of calcite-avatica.git except for {{avatica}} \* {{git mv avatica/\* .}} \* {{git rm avatica}} from calcite.git \* Update Avatica website to deploy into it's own {{\_site/target}} instead of {{../\_site/target}} \* Create news article for Avatica and Calcite websites (let people know -- in addition to an email) I think that's it.
2. A few more: \* Give avatica its own .gitattributes, .gitignore etc. \* Remove avatica files from the calcite repo \* Update travis and other CI \* Revise avatica's README.md if necessary \* Search and replace "https://github.com/apache/calcite" in .md files. For example history.md currently it points to tags like https://github.com/apache/calcite/releases/tag/calcite-avatica-1.9.0 This can (and I think should) happen after calcite-1.12 and before avatica-1.10.
3. **body:** Good list, Julian! Think of any more? Given the lack of objections so far, do you think we need more formality on doing the above? I had initially agreed with your assessment to vote, but now think it might be unnecessary since I believe the only individual to have disagreed with this plan before was yourself :) Ideally, I could get to this over the weekend.  
**label:** code-design
4. I think we need more process than we give to a regular commit (i.e. a couple of emails and a few comments on a JIRA) because this decision is difficult to undo. I think a lazy consensus vote thread is appropriate. Even though, yes, I foresee no objections.
5. And by the way, on the thread, you should ask people to make no further commits to avatica until we have a decision. It would be nice to make a clean break following the calcite release.
6. https://lists.apache.org/thread.html/510bd4664fbca24654efeffd366d8fca38b926f43409ca38c58e08b0@%3Cdev.calcite.apache.org%3E
7. GitHub user joshelser opened a pull request: https://github.com/apache/calcite-avatica/pull/1 CALCITE-1717 Add Avatica and remove the rest of Calcite You can merge this pull request into a Git repository by running: \$ git pull https://github.com/joshelser/calcite-avatica 1717-avatica-repo-update Alternatively you can review and apply these changes as the patch at: https://github.com/apache/calcite-avatica/pull/1.patch To close this pull request, make a commit to your master/trunk branch with (at least) the following in the commit message: This closes #1 ---- commit 031212540d81f13b23f2b40ef342c6b94b5cc702 Author: Josh Elser <elserj@apache.org> Date: 2017-03-30T21:47:08Z [CALCITE-1717] Remove Calcite code and lift avatica commit 3f0f4f97ee5b72fba977a578b3ebdbf6985bd92d Author: Josh Elser <elserj@apache.org> Date: 2017-03-30T21:47:21Z [CALCITE-1717] Update .travis.yml commit 546b3e3451e70c89735759235c267732b2d3b219 Author: Josh Elser <elserj@apache.org> Date: 2017-03-30T22:32:38Z [CALCITE-1717] Update source URLs in site commit 084b2085c6e8563fa0518b9327dbebdbbc3321b0b Author: Josh Elser <elserj@apache.org> Date: 2017-03-30T22:38:56Z [CALCITE-1717] Fix Github references across markdown files commit 0e98f17b0d566fea325644fdce7138e00a79b4b1 Author: Josh Elser <elserj@apache.org> Date: 2017-03-30T22:49:05Z [CALCITE-1717] Update the README with the right travis badge Switched it to my account for now, can move it back to Julian's when he gets his account updated. commit 101b60607d7ede18745f31a7a383b76009b2eefe Author: Josh Elser <elserj@apache.org> Date: 2017-03-31T18:03:08Z [CALCITE-1717] Blog post for the new repo ----
8. [~julianhyde]: two PRs if you have the time to look them over: https://github.com/apache/calcite/pull/417 https://github.com/apache/calcite-avatica/pull/1 I've already pushed the current HEAD to calcite-avatica as well as the relevant tags (e.g. calcite-avatica-\* and the calcite/optiq tags before we separated the two maven builds)

9. Github user julianhyde commented on a diff in the pull request: [https://github.com/apache/calcite-avatica/pull/1#discussion\\_r109268544](https://github.com/apache/calcite-avatica/pull/1#discussion_r109268544) --- Diff: .travis.yml --- @@ -28,11 +28,11 @@ branches: - /^branch-.\*\$/ - /^[0-9]+-.\*/ install: - - cd avatica && mvn install -DskipTests=true -Dmaven.javadoc.skip=true -B -V && cd .. --- End diff -- also need to change line 2 "See <https://travis-ci.org/apache/calcite>"
10. Github user julianhyde commented on the issue: <https://github.com/apache/calcite-avatica/pull/1> Builds fine. Tests pass. IntelliJ loads up fine. \* In pom.xml, change connection and developerConnection to scm:git:<https://git-wip-us.apache.org/repos/asf/calcite.git> - otherwise release build will fail. \* A few occurrences of "calcite dependencies first" in `pom.xml` files. \* There's a `.gitignore` under tck that I'm not sure is still required. \* A few updates needed in `howto.md`, e.g. `git tag -d apache-calcite-X.Y.Z` (but `dist/dev/calcite` is still fine)
11. Alright, I think this is all done. Thanks for your help, Julian!
12. Github user asfgit closed the pull request at: <https://github.com/apache/calcite-avatica/pull/1>
13. Forgot to tag the commits: [https://git-wip-us.apache.org/repos/asf?p=calcite-avatica.git;a=commit;h=5289d343fb9eb2f54233f0bc54b2672023f4de14](https://git-wip-us.apache.org/repos/asf?p=calcite.git;a=commit;h=5289d343fb9eb2f54233f0bc54b2672023f4de14) <https://git-wip-us.apache.org/repos/asf?p=calcite-avatica.git;a=commit;h=fc7b26c8b8545f4b969108cb3d8e8064d870a09c> <https://git-wip-us.apache.org/repos/asf?p=calcite-avatica.git;a=commit;h=511910559b4e6343ac134ff50d193f5f8c4bfac0>
14. Resolved in release avatica-1.10.0 (2017-05-30).
