

Item 222

git_comments:

1. not a single host resolved
2. Checks that a non-existent host will not block the connection
3. enable permute
4. disable permute

git_commits:

1. **summary:** ZOOKEEPER-3095: Connect string fix for non-existent hosts

body: ZKPatch: eda58d9970c76831046ddc45251c9b110856836e (extract)

github_pulls_comments:

1. hey @mjeelanimst when i did the commit, your email address came up wrong. i think i fixed it, but you might want to check your git config. thanx for the submission!
2. Thanks for the commit @breed ! My email was indeed not set properly; thanks for letting me know - I've fixed it now.
3. Any chance this can be backported to 3.5.x? We're hitting this in production (ZK runs in Kubernetes, and DNS doesn't resolve for pods that are down.) cc: @igorcanadi
4. @tudor No problem. Would you mind cherry picking to branch-3.5 and submitting a pull request?
5. @anmolnar , @tudor , I've created this PR -<https://github.com/apache/zookeeper/pull/1259> for this.

github_pulls_reviews:

1. **body:** 4 space indent ;)
label: code-design
2. **body:** 4 space indent
label: code-design
3. is this correct? how did this work before?
4. and is it related to this change? ;)
5. Yes, seems the old code is not working if the base_dir is not specified. We were using this to test the change manually, so it's related from testing purpose.
