1. **title:** HDDS-3351. Remove unnecessary dependency Curator.
body: ## What changes were proposed in this pull request? Remove Curator dependency which is not used, and remained there from the time when we migrated the pom.xml to ozone.pom.xml in the Hadoop project. ## What is the link to the Apache JIRA <https://issues.apache.org/jira/browse/HDDS-3351> ## How was this patch tested? Locally I ran 'mvn clean install -DskipTests', it was running fine.

github_pulls_comments:

1. Thank You @fapifta for the contribution and @swagle for the review.
2. Thanks the patch @fapifta (And the quick review @bharatviswa504 and @swagle) For the record: this patch *doesn't* remove the curator dependency. It modifies a `` not a `` section. `` is responsible for defining the **default versions** not dependencies. > Locally I ran 'mvn clean install -DskipTests', it was running fine. I did the same after this patch (using 9872253e8). And I checked the jar files: `` mvn clean install -DskipTests cd hadoop-ozone/dist/target/ozone-0.6.0-SNAPSHOT find -name "*cura*" ./share/ozone/lib/curator-client-2.12.0.jar ./share/ozone/lib/curator-framework-2.12.0.jar ./share/ozone/lib/curator-recipes-2.12.0.jar `` Curator is added as a dependency via the transitive dependencies of Hadoop artifacts. To fully remove it you should `` it from the dependency hierarchy. But don't worry. It's a good patch anyway (I am +1, even if it's too late ;-)). 1. We are not interested in curator, so it can be removed from the ``, too 2. But to remove curator fully we need some exclude rules (the good news is that it should be done by #744, at least on the client side. We should double check the server-side)
