15. I remember `admin.getRegionServers()` will get the list of live servers only, excluding decommissioned already. Will we need to get the list of decommissioned again?
16. > I remember `admin.getRegionServers()` will get the list of live servers only, excluding decommissioned already. > > Will we need to get the list of decommissioned again? @Reiddddd I don't think servers marked in decommission are getting excluded in `admin.getRegionServers()`. I did confirm that with unit tests written as part of this PR.

18. It's not what you think It's what code says: `` `/** * @return current live region servers list * @throws IOException if a remote or network exception occurs */ default Collection<ServerName> getRegionServers() throws IOException { return getClusterMetrics(EnumSet.of(Option.SERVERS_NAME)).getServersName(); } ``
19. @Reiddddddd here is a sample test case to prove otherwise. I ran it in `TestRegionMover`: `` @Test public void abc() throws Exception { MiniHBaseCluster cluster = TEST_UTIL.getHBaseCluster(); Assert.assertEquals(0, TEST_UTIL.getAdmin().listDecommissionedRegionServers().size()); Assert.assertEquals(3, TEST_UTIL.getAdmin().getRegionServers().size()); HRegionServer excludeServer = cluster.getRegionServer(0); TEST_UTIL.getAdmin().decommissionRegionServers(Collections.singletonList(excludeServer.getServerName()), false); TEST_UTIL.waitFor(3000, () -> { try { List<ServerName> decomServers = TEST_UTIL.getAdmin().listDecommissionedRegionServers(); return decomServers.size() == 1 && decomServers.get(0).equals(excludeServer.getServerName()); } catch (IOException e) { throw new RuntimeException(e); } }); // confirm that 1 server is marked as decommissioned Assert.assertEquals(1, TEST_UTIL.getAdmin().listDecommissionedRegionServers().size()); // confirm that even after decommissioning 1 server, Admin.getRegionServers() still return // 3 servers i.e. it does not exclude decommissioned server Assert.assertEquals(3, TEST_UTIL.getAdmin().getRegionServers().size()); } `` Ideally, last line should have been: `` Assert.assertEquals(2, TEST_UTIL.getAdmin().getRegionServers().size()); ``
20. Then you should fix the bug in admin.getRegionServers(), because it doesn't behave as expected. If it runs right, then HBASE-24102 is not a problem anymore.
21. > Then you should fix the bug in admin.getRegionServers(), because it doesn't behave as expected. > If it runs right, then HBASE-24102 is not a problem anymore. `admin.getRegionServers()` is running correctly, it does list down all live servers (including decommissioned live servers). Some servers can be live but in decommissioned state. For client to figure out which servers are live and marked in decom state, we have `admin.listDecommissionedRegionServers()` API.
22. The thing is when we mark RS in decom state, we do it to ensure no new regions are assigned to it anymore as long as it stays live. Hence, it should be `unload()` function's own responsibility to not offload any region from source RS to decommissioned RS.
23. Just checked related decommission code. You're right, no comment from me.

github_pulls_reviews:

1. Add debug logging at least of set of decommissioned RS found?
2. Good
3. Should we wait for the decom to happen or just start the region mover tool and then finally assert that none of the regions are in the decom node - assuming the region plan was created even before the decom was completed. Else LGTM.
4. > assuming the region plan was created even before the decom was completed. In this case, ``admin.listDecommissionedRegionServers()`` might not return server which is going to be decommissioned right? Hence, I put wait here to ensure asynchronously, RS is in decom state. What we want to do as part of ``unload()`` function is to not include any server which is decommissioned by retrieving them from ``admin.listDecommissionedRegionServers()``. If by any chance, while unload is busy unloading regions to many region servers, we might start decommission of some servers. So in this case, we might not be able to stop unloading regions to such nodes. or let's say we unloaded regions to all other servers and after that some were put to decommissioning, if regions are still online on that servers, we should be able to load them back successfully. What we want is for `unload()` to ensure any server already marked as decom should not be selected. Or I am missing something?
5. Sure thing
6. extra space line
7. is this 3s? If so, is this enough?
8. Actually, 3s is too much :) Upper bound ideally should not be more than 1s, this is just to be on safer side.
