github_pulls_reviews:

1. Could we put log4j2 test in rocketmq example module ?
2. **body:** As log4j is widely used in example,add this test in example will make it confused to choose log moudle.
label: code-design
3. **body:** Did you use the right code style? <http://rocketmq.apache.org/docs/code-guidelines/>
label: code-design
4. Any assert or thrown exception?
5. Assert has been added.
6. We'd better use org.junit.Assert.
7. Add logClass and its getter for test purpose only?
8. Fixed it with reflect
9. we'd better remember this task and fix it later.
10. why modify the init method?

jira_issues:

1. **summary:** Client log4j2 logging
description: When using RocketMQ client,we can only using logback or log4j for logging. If we using log4j2,there is no client log.
