jira_issues_comments:

1. Agree with that ;)
2. also +1

3. **body:** the repo parsing now removes all white space and newline/endline using regexp "\\s". I don't think we can have URI's with spaces, but I could be wrong. I implemented a test also that exercised the issue using a repo2.xml file.
label: code-design
4. Hi Heath, Thanks for this patch I think in the RepositoryImpl.java, simply using uri = uri.trim(); is better than uri = uri.replaceAll("\\s", ""); from your patch. As String.trim() can trim whitespace, \t\r\n from the string, but won't remove any whitespace in the middle of the string, so it avoid the potential risk if URI have whitespace. Moreover, your patch is valuable when parse the features.xml during runtime, but this issue is mainly about the features-maven-plugin:add-features-to-repo have issues, so your patch doesn't really fix it, we should fix it in some where like AddToRepositoryMojo.java. I'll take care of it and fix it soon. Best Regards Freeman
5. Hi, I'm going to apply your patch with the change I mentioned firstly and then fix the AddToRepositoryMojo issue. Freeman
6. apply patch on behalf of Heath Kesler with thanks <http://svn.apache.org/viewvc?rev=1372740&view=rev>
7. commit fix <http://svn.apache.org/viewvc?rev=1372747&view=rev> for trunk
<http://svn.apache.org/viewvc?rev=1372749&view=rev> for 2.3.x branch <http://svn.apache.org/viewvc?rev=1372748&view=rev> for 2.2.x branch
8. @Freeman - thanks for the feedback, I had thought about using trim but was not sure about white spaces in the uri and since the tests passed I left it with the replaceAll. The test I wrote fails with white spaces in the URI using trim(). I will look at the patch you wrote and see what you did differently.
9. **body:** Freeman, here is a test to exercise the changes you made for the AddToRepositoryMojo class.
label: test
10. **body:** I did test the trim() against a test I have for the RepositoryImpl class and it fails when there is a space in the URI, should I open a different jira for that or just continue to track it here? Thanks for helping me on this. I will add the test that fails to this jira so you can verify it.
label: test
11. Here is the patch that will exercise the test failure when a non-encoded white space is in the uri. Let me know what you think.
12. **body:** Hi Heath, First of all, I don't think we should change content of the URI, so if any user has unencoded whitespace inside URI, they should get exception so that they know they do something wrong, just like if users has typo in URI hence can't get files they should know that they do something wrong and they need correct it themselves. But remove the whitespace \t\r\n from beginning or end of the URI is OK, it doesn't change the URI content, it just get a better format URI. Btw, I like your AddToRepositoryMojoTest, it prove the trim works, and I will apply it to trunk(with minor change, I don't wanna the space inside URI and actually your test not run into URI parse) Freeman
label: documentation
13. apply patch which add AddToRepositoryMojoTest on behalf of Heath Kesler with thanks <http://svn.apache.org/viewvc?rev=1373188&view=rev> @Heath, Do you wanna backport AddToRepositoryMojoTest to Karaf 2.x line?
14. Hi Freeman, your comments make sense, thanks for the feedback. I will backport the test to the karaf 2.x also.
15. Freeman, here is the test for the 2.3 branch
16. apply patch which add AddFeaturesToRepoMojoTest on behalf of Heath Kesler with thanks <http://svn.apache.org/viewvc?rev=1374896&view=rev> for 2.3.x branch <http://svn.apache.org/viewvc?rev=1374897&view=rev> for 2.2.x branch
