github_pulls:

1. **title:** removed unnecessary boxing
body: Follow this checklist to help us incorporate your contribution quickly and easily: - [] Make sure there is a [JIRA issue](https://https://servicecomb.atlassian.net/projects/JAV/issues) filed for the change (usually before you start working on it). Trivial changes like typos do not require a JIRA issue. Your pull request should address just this issue, without pulling in other changes. - [x] Each commit in the pull request should have a meaningful subject line and body. - [] Format the pull request title like ``[JAV-XXX] Fixes bug in ApproximateQuantiles``, where you replace ``JAV-XXX`` with the appropriate JIRA issue. - [x] Write a pull request description that is detailed enough to understand what the pull request does, how, and why. - [x] Run ``mvn clean install`` to make sure basic checks pass. A more thorough check will be performed on your pull request automatically. - [] If this contribution is large, please file an Apache [Individual Contributor License Agreement](https://www.apache.org/licenses/icla.pdf). --- fix #377
