jira_issues_comments:

1. [~ankit@apache.org] [~sergey.soldatov] [~elserj] Here is the patch replace deprecated HTD,HCD and HRI with TableDescriptor, ColumnFamilyDescriptor, RegionInfo respectively. Please review.
2. **body:** LGTM. {code} @@ -1690,17 +1675,17 @@ public class ConnectionQueryServicesImpl extends DelegateQueryServices implement private void ensureViewIndexTableCreated(PTable table, long timestamp, boolean isNamespaceMapped) throws SQLException { byte[] physicalTableName = table.getPhysicalName().getBytes(); - HTableDescriptor htableDesc = this.getTableDescriptor(physicalTableName); + TableDescriptor htableDesc = this.getTableDescriptor(physicalTableName); {code} Nit: space :)
label: code-design
3. LGTM, but not compatible with the 5.x branch already. (5 files in conflict).
4. Ankit handled the conflicts and committed the patch. Thanks [~ankit@apache.org]. This issue is specific to HBase 2.0 hence closing.
5. [~rajeshbabu], In the addendum I see, we are ignoring SecureUserConnectionsTest, is there any reason for it?
6. FYI, I changed fixVersion from 4.14.0 to 5.0.0 as I don't think this has made it yet to 4.x branches.

7. FAILURE: Integrated in Jenkins build PreCommit-PHOENIX-Build #1930 (See [https://builds.apache.org/job/PreCommit-PHOENIX-Build/1930/]) PHOENIX-4304 Refactoring to avoid using deprecated
