

Item 115

git_comments:

1. enlist threads pools in use on endpoint
2. **comment:** shutdown thread pools
label: code-design
3. * * Add thread pool which are in-use, we need to un-register when shutting down.

git_commits:

1. **summary:** CAMEL-4853: Prefer to use cached thread pools as Mina documentation suggest. Ensure thread pools is also shutdown.
message: CAMEL-4853: Prefer to use cached thread pools as Mina documentation suggest. Ensure thread pools is also shutdown. git-svn-id: <https://svn.apache.org/repos/asf/camel/trunk@131123813f79535-47bb-0310-9956-ffa450edef68>

1. **summary:** camel-mina - Make it easier to use a custom thread pool for the consumer
description: It should be easier to use a custom thread pool for the mina consumer, in case you use it in sync mode, where the consumer thread would then be synchronous, and thus take up a thread. So in case you put load on the mina consumer, it will use up the default thread pool size of 10 threads. We should add documentation in the wiki, how to use a custom thread pool / and pool profile. See nabble <http://camel.465427.n5.nabble.com/inflight-exchange-and-queue-of-apache-camel-tp5112396p5112396.html>

jira_issues_comments:

1. **body:** Using threading model more accordingly to mina doc/recommendations. Ensure thread pools is also shutdown if shutting down the endpoint that created them.
label: documentation
