

git_comments:

1. * * @deprecated since 5.0.0
2. this is to use a different renderer for Tobago components and other components.
3. * * Renders the tobago-behavior tag. * * @since 5.0
4. **comment:** todo: all the other attributes
label: requirement
5. if there is no explicit behavior (with f:ajax or tc:event), use the command properties as default.
6. tbd: rename to actionId?
7. * * <f:ajax> attribute
8. prepare overlay for all by AJAX reloaded elements
9. this means: AJAX case?
10. this is a special case, because the "load" is too late now.
11. , options: commandHelper
12. reset the source field after submit, to be prepared for possible next AJAX with decoupled=true
13. "javax.faces.behavior.event": this.event,

git_commits:

1. **summary:** Introducing <tobago-behavior> instead of data-tobago-command attribute.
message: Introducing <tobago-behavior> instead of data-tobago-command attribute. Renaming command attribute "transition" to NOT "decoupled". Tests: call events with .dispatchEvent(new Event(..., {bubbles: true})); issue: TOBAGO-1633: TS refactoring

1. **summary:** Use TypeScript instead of JavaScript.
description: Will be implemented with: * mv JavaScript code in to TypeScript files (should be more or less compatible) (/) * using a ts transpiler from node js in build time (executed from maven pom.xml) (/) * Using [Custom Elements|https://html.spec.whatwg.org/multipage/custom-elements.html#custom-elements] ** Using e. g. <tobago-in> instead of <div class="tobago-in"> as main-tag ** Introducing <tobago-behavior> instead of data-tobago-command attribute. Renaming command attribute "transition" to NOT "decoupled". ** Work in progress (!) * Using Custom Events ** avoid tobago javascript imports (e.g. tobago-listener) for projects (like the demo) * optimize code ** native TypeScript ** using classes ** using custom elements * Check, if we need jQuery vs. Vanilla JS ** Current progress: Most jQuery code was removed, but some included libs stil using jQuery: *** datePicker *** typeahead *** ... * Check to remove jQuery UI (e. g. widget factory) * Current problems (09/19/2019) ** (x) Date: change event doesn't call ajax (seems to depend on the date JS framework) ** (x) AJAX TabSwitch: at the first call, the oder of setting the new index and the AJAX call is wrong ** (x) Test for Tree Select fails ** (x) drop down doesn't works ** (?) ajaxListener doesn't work ** (x) tc:selectManyShuttle - ajax ** (x) closing X for tc:messages
