1. **summary:** [#1568] rocketmq need enhance stability when commitlog broken

message: [#1568] rocketmq need enhance stability when commitlog broken 增加非空判断,防止空指针异常,导致循环事务 check,增

加test覆盖 label: test

github_issues:

1. title: rocketmq need enhance stability when commitlog broken

body: 我们生产发现rocketMq 事务消息不停回调,导致事务消息不可用,丢失消息,目前版本是4.3.1,但是我发现后面版本没有修复主要原因已经发现如下事务消息回调,是先批量处理触发回调check,在更新RMQ_SYS_TRANS_HALF_TOPIC上的offset,一旦在批量处理中有异常,就会跳过更新RMQ_SYS_TRANS_HALF_TOPIC上的offset,导致每次处理都报相同的错和回调同一批事务消息,不管他有没有在RMQ_SYS_TRANS_OP_HALF_TOPIC, broker 回调check报错日志如下(一分钟一次): java.lang.NullPointerException at

org.apache.rocketmq.broker.transaction.queue.TransactionalMessageBridge.getMessage(TransactionalMessageBridge.java:136) at org.apache.rocketmq.broker.transaction.queue.TransactionalMessageBridge.getHalfMessage(TransactionalMessageBridge.java:108) at org.apache.rocketmq.broker.transaction.queue.TransactionalMessageServiceImpl.pullHalfMsg(TransactionalMessageServiceImpl.java:379) at

 $org.apache.rocketmq.broker.transaction.queue.TransactionalMessageServiceImpl.getHalfMsg(TransactionalMessageServiceImpl.java:444) at org.apache.rocketmq.broker.transaction.queue.TransactionalMessageServiceImpl.check(TransactionalMessageServiceImpl.java:164) at org.apache.rocketmq.broker.transaction.TransactionalMessageCheckService.onWaitEnd(TransactionalMessageCheckService.java:76) at org.apache.rocketmq.common.ServiceThread.waitForRunning(ServiceThread.java:121) at <math display="block"> \frac{1}{2} \frac{1$

org.apache.rocketmq.broker.transaction.TransactionalMessageCheckService.run(TransactionalMessageCheckService.java:65) at java.lang.Thread.java:745)、 报错细节如下; 1)我们的底层消息字节有损坏,导致

org.apache.rocketmq.common.message.MessageDecoder#decode(java.nio.ByteBuffer, boolean, boolean, boolean)方法转化抛异常,decodeMsgList直接吃了异常,返回null 2)

org.apache.rocketmq.broker.transaction.queue.TransactionalMessageBridge#decodeMsgList,直接把null加入到返回的
List<MessageExt> foundList 3)导致在org.apache.rocketmq.broker.transaction.queue.TransactionalMessageBridge#getMessage,的
136行 获取消息存储时间报了空指针,4)org.apache.rocketmq.broker.transaction.queue.TransactionalMessageServiceImpl#check方
法在获取待确定回调时,报空指针,没有更新 transactionalMessageBridge.updateConsumeOffset(messageQueue, newOffset); 5)每

次重复相同过程,导致不停重复回调check,事务消息不可用

2. **title:** rocketmq need enhance stability when commitlog broken

body: 我们生产发现rocketMq 事务消息不停回调,导致事务消息不可用,丢失消息,目前版本是4.3.1,但是我发现后面版本没有修复 主要原因已经发现如下 事务消息回调,是先批量处理触发回调check,在更新RMQ_SYS_TRANS_HALF_TOPIC上的offset,一旦在批量处理中有异常,就会跳过 更新RMQ_SYS_TRANS_HALF_TOPIC上的offset,导致每次处理都报相同的错和回调同一批事务消息,不管他有没有在RMQ_SYS_TRANS_OP_HALF_TOPIC, broker 回调check报错日志如下(一分钟一次): java.lang.NullPointerException at

org.apache.rocketmq.broker.transaction.queue.TransactionalMessageBridge.getMessage(TransactionalMessageBridge.java:136) at org.apache.rocketmq.broker.transaction.queue.TransactionalMessageBridge.getHalfMessage(TransactionalMessageBridge.java:108) at org.apache.rocketmq.broker.transaction.queue.TransactionalMessageServiceImpl.pullHalfMsg(TransactionalMessageServiceImpl.java:379) at

org. apache. rocketmq. broker. transaction. queue. Transactional Message Service Impl. get Half Msg (Transactional Message Service Impl. java: 444) at org. apache. rocketmq. broker. transaction. queue. github_issues_comments:

- 1. 各位大腿看看,这样修改,影不影响外部 offset,主要是跳过这个 异常的消息,让其不影响正常的事务回调check ,感谢。
- 2. @guyuezheng will review this pr ASAP.
- 3. > @guyuezheng will review this pr ASAP. 大神,我就加一个if 非空判断 https://github.com/apache/rocketmq/pull/1569 可以这样改不,我们生产有出现了
- 4. 第一次pull request,有一点激动呀
- 5. > @guyuezheng will review this pr ASAP. 有没有什么零时解决方案,我们生产还是在报
- 6. >> @guyuezheng will review this pr ASAP. >> 有没有什么零时解决方案,我们生产还是在报 你可以按照你的修改,自己打包用起来。
- 7. @guyuezheng commitlog损坏了的话,很难进行修复,因为你后面的消息很有可能也是坏的,这个时候只能把备机切换为主机, 其他具体的信息可以加我钉钉: juicehenry
