## Item 246

## git\_comments:

1. if invoker is destroyed due to address refresh from registry, let's allow the current invoke to proceed

## git\_commits:

1. **summary:** #2016: merge fix from 2.7.0 to 2.6.x (#2680) **message:** #2016: merge fix from 2.7.0 to 2.6.x (#2680)

## github\_issues:

```
1. title: Consumer throws RpcException after RegistryDirectory notify in high QPS
           body: - [x] I have searched the [issues](https://github.com/apache/incubator-dubbo/issues) of this repository and believe that this is not a duplicate. - [x] I have
           checked the [FAQ](https://github.com/apache/incubator-dubbo/wiki/FAQ) of this repository and believe that this is not a duplicate. ### Environment * Dubbo
           version: 2.5.10 * Operating System version: MacOS Sierra 10.12 * Java version: JDK 1.8 ### Step to reproduce this issue 1. Start dubbo provider (retries=0). 2.
           Start dubbo consumer*10 in 5000 QPS (provider in 5w QPS). 3. Update dynamic config(override URL) for consumer, it will trigger RegistryDirectory notify(same
           as DubboAdmin 动态配置). ### Expected Result The dynamic config(override url) takes effect after RegistryDirectory notify, without RpcException . ### Actual
           Result What is actually happen? Sometimes, client throws RpcException after dynamic config, because invoker been destroyed after refreshInvoker. This issue
           may happen in low QPS, 5W QPS happens in high rate(dubbo's default.retires=2 covers the issue). Note: We have set default.retries=0 in the concerns of
          idempotency, because consumer will retry always. The AbstractInvoker throws the RpcException as it been destroyed. ```java public Result invoke(Invocation inv) throws RpcException { if (destroyed.get()) { throw new RpcException("Rpc invoker for service " + this + " on consumer " + NetUtils.getLocalHost() + " use
           dubbo version " + Version.getVersion() + " is DESTROYED, can not be invoked any more!"); } } ``` RegistryDirectory refreshInvoker destroyed the unused
          invoker, which caused the issue. ```java private void refreshInvoker(List<URL> invokerUrls) { .... this.methodInvokerMap = multiGroup ? toMergeMethodInvokerMap(newMethodInvokerMap) : newMethodInvokerMap; this.urlInvokerMap = newUrlInvokerMap; try {
           destroyUnusedInvokers(oldUrlInvokerMap, newUrlInvokerMap); // Close the unused Invoker } catch (Exception e) { logger.warn("destroyUnusedInvokers error. ", e); } } ``` If there is an exception, please attach the exception trace: Just put your stack trace here! ``` com.alibaba.dubbo.rpc.RpcException: Rpc invoker for
               ', e); } } } ``` If there is an exception, please attach the exception trace: Just put your stack trace here!

5. title: Consumer throws RpcException after RegistryDirectory notify in high QPS
          body: - [x] I have searched the [issues](https://github.com/apache/incubator-dubbo/issues) of this repository and believe that this is not a duplicate. - [x] I have
          checked the [FAQ](https://github.com/apache/incubator-dubbo/wiki/FAQ) of this repository and believe that this is not a duplicate. ### Environment * Dubbo
          version: 2.5.10 * Operating System version: MacOS Sierra 10.12 * Java version: JDK 1.8 ### Step to reproduce this issue 1. Start dubbo provider (retries=0). 2.
          Start dubbo consumer*10 in 5000 QPS (provider in 5w QPS). 3. Update dynamic config(override URL) for consumer, it will trigger RegistryDirectory notify(same
          as DubboAdmin 动态配置). ### Expected Result The dynamic config(override url) takes effect after RegistryDirectory notify, without RpcException . ### Actual
          Result What is actually happen? Sometimes, client throws RpcException after dynamic config, because invoker been destroyed after refreshInvoker. This issue
          may happen in low QPS, 5W QPS happens in high rate(dubbo's default.retires=2 covers the issue). Note: We have set default.retries=0 in the concerns of
         idempotency, because consumer will retry always. The AbstractInvoker throws the RpcException as it been destroyed. ```java public Result invoke(Invocation inv) throws RpcException { if (destroyed.get()) { throw new RpcException("Rpc invoker for service " + this + " on consumer " + NetUtils.getLocalHost() + " use dubbo version " + Version.getVersion() + " is DESTROYED, can not be invoked any more!"); } ``` RegistryDirectory refreshInvoker destroyed the unused
         invoker, which caused the issue. ```java private void refreshInvoker(List<URL> invokerUrls) { .... this.methodInvokerMap = multiGroup ? toMergeMethodInvokerMap(newMethodInvokerMap) : newMethodInvokerMap; this.urlInvokerMap = newUrlInvokerMap; try {
          destroyUnusedInvokers(oldUrlInvokerMap, newUrlInvokerMap); // Close the unused Invoker } catch (Exception e) { logger.warn("destroyUnusedInvokers error.
         ", e); } } ``` If there is an exception, please attach the exception trace: Just put your stack trace here! ``` com.alibaba.dubbo.rpc.RpcException: Rpc invoker for service interface com.ctrip.framework.benchmark.api.BenchmarkService -> dubbo://10.5.89.100:20880/com.ctrip.framework.benchmark.api.BenchmarkService?
