1. **summary:** hbase shell needs to warn on deleting multi-region table
   **description:** if a multi-region table is deleted, then re-created, the old regions in the storefiles can interfere with the new table. to fix this, a major compaction should be issued before loading the new table. the shell should warn people of this so we don't end up with unhappy users.

**jira_issues_comments:**

1. I added to troubleshooting and I did this in shell: {code} Index: bin/hirb.rb =================================================================== --- bin/hirb.rb (revision 772422) +++ bin/hirb.rb (working copy) @@ -194,8 +194,11 @@ disable Disable the named table: e.g. "hbase> disable 't1'" - drop Drop the named table. Table must first be disabled + drop Drop the named table. Table must first be disabled. If table has + more than one region, run a major compaction on .META.: + hbase> major_compact ".META." + enable Enable the named table {code}
2. **body:** probably should add same comment to 'truncate' operation, or at least point to the comments in 'drop'.
   **label:** documentation
