github_pulls:

1. **title:** [CAMEL-13704] - Added PR template file with instructions on what to include
   body: CAMEL-13704 - https://issues.apache.org/jira/projects/CAMEL/issues/CAMEL-13704?
   filter=allopenissues I have created a PR template file for this repo, this will set a format for future PRs

github_pulls_comments:

1. Should I just have the below notes in the PR template? (I have removed comments relating to JIRA) [ ]
   Each commit in the pull request should have a meaningful subject line and body. [ ] Write a pull request
   description that is detailed enough to understand what the pull request does, how, and why. [ ] Run `mvn
   clean install -Psourcecheck` in your module with source check enabled to make sure basic checks pass
   and there are no checkstyle violations. A more thorough check will be performed on your pull request
   automatically. Below are the contribution guidelines:
   https://github.com/apache/camel/blob/master/CONTRIBUTING.md
2. **body:** I'd propose something like this: [ ] An [issue](https://github.com/apache/camel-quarkus/issues)
   should be filed for the change unless this is a trivial change (fixing a typo or similar). One issue should
   ideally be fixed by not more than one commit and the other way round, each commit should fix just one
   issue, without pulling in other changes. [ ] Each commit in the pull request should have a meaningful and
   properly spelled subject line and body. Copying the title of the associated issue is typically enough. Please
   include the issue number in the commit message prefixed by `#`. [ ] The pull request description should
   explain what the pull request does, how, and why. If the info is available in the associated issue or some
   other external document, a link is enough. [ ] Phrases like `Fix #<issueNumber>` or `Fixes #
   <issueNumber>` will auto-close the named issue upon merging the pull request. Using them is typically a
   good idea. [ ] Please run `mvn process-resources -Pformat` (and amend the changes if necessary) before
   sending the pull request. [ ] Contributor guide is your good friend: https://camel.apache.org/camel-
   quarkus/latest/contributor-guide.html
   label: documentation
3. Thank you for the feedback! I have edited the file with the proposed changes

github_pulls_reviews:

jira_issues:

1. **summary:** Add github pull request template for PR instruction
   description: It's standard procedure to accept the big contribution with iCLA granted in ASF. We should
   list this information when the contributor send the PR by specifying a PR template for github. It could be
   annoying for the experienced contributors, but it could save us some time for the new contributors. Here
   is a draft I have, please add comment for it. {code} - [ ] Make sure there is a [JIRA issue]
   (https://issues.apache.org/jira/browse/CAMEL) filed for the change (usually before you start working on
   it). Trivial changes like typos do not require a JIRA issue. Your pull request should address just this issue,
   without pulling in other changes. - [ ] Each commit in the pull request should have a meaningful subject
   line and body. - [ ] Format the pull request title like `[CAMEL-XXX] Fixes bug in camel-file
   component`, where you replace `CAMEL-XXX` with the appropriate JIRA issue. - [ ] Write a pull
   request description that is detailed enough to understand what the pull request does, how, and why. - [ ]

Run `mvn clean install` in your module to make sure basic checks pass. A more thorough check will be performed on your pull request automatically. - [ ] If this contribution is large, please file an Apache [Individual Contributor License Agreement](https://www.apache.org/licenses/icla.pdf). {code}

jira_issues_comments:

1. +1, we need to ask INFRA to add this PR template.
2. [~acosentino] Actually we can do it by committing the file into .github directory.
3. thanks [~njiang] that sound great. [~davsclaus] does this sound good for you too? We can apply this to camel, camel-k, camel-quarkus.
4. A commend about "Make sure there is a [JIRA issue]" : I would rework it as for camel-k and camel-quarkus we have activated github issues so a JIRA issue is not required (the subsequent requirement need to be amended as well)
5. Yeah sounds good to me too I would also refer people to our contribution guideline at https://github.com/apache/camel/blob/master/CONTRIBUTING.md
6. Hi, I am a potential outreachy intern. Would it be possible for me to work this?
7. I have added this template to the camel, camel-k, and camel-quarkus repos
8. We need this for the https://github.com/apache/camel-website/ repository as well.
