1. **summary:** LLAP: dags get stuck in yet another way
   description: DAG gets stuck when number of tasks that is multiple of number of containers on machine (6, 12, ... in my case) fails to finish at the end of the stage (I am running a job with 500-1000 maps). Status just hangs forever (beyond 5 min timeout) with some tasks shown as running. Happened twice on 3rd DAG with 1000-map job (TPCH Q1), then when I reduced to 500 happened on 7th DAG so far. [~sseth] has the details.

jira_issues_comments:

1. Update on another run with 500 maps it got stuck on the 3rd DAG so I guess it's not based on the number of tasks...
2. [~prasanth_j] fyi
3. **body:** [~sseth] Can you take a look at the patch? The task scheduler is much more simplified now. Removed all book-keeping data structures.
   label: code-design
4. Committed to llap branch.
5. I got it stuck again :) Latest build. Internal app ids application_1431919257083_2673 and application_1431919257083_2674. Logs provided upon request.
