github_pulls_reviews:

1. Statics. normally capitalized as in HTU rather than htu.
2. Above its sslconf... you want conf here?
3. Ditto. We use conf instead of sslconf here... That intentional?
4. Capitalize
5. And maybe you want to use the HTU's conf. Do HTU.getConfiguration instead of creating a 'new Configuration()' in line above ... and FYI, for configs that will include hbase config, you want HBaseConfiguration.create.... instead of new Configuration.
6. It's more client / server now, tried a rename
7. Hey @markrmiller I don't think this variable is defined anywhere. Missing some other change someplace?
8. It was initially just meant to be harmless - it allows you to override via system property but does not yet try to manage tmp dirs internally. I'll file a small follow up issue to look at that. Just wanted fast, safe way to override without patching.
9. According to the docs, it can already be overridden via the `tempDir` property. that not working for you? http://maven.apache.org/surefire/maven-surefire-plugin/test-mojo.html#tempDir
