git_commits:

1. **summary:** Merge pull request #2100 from himanshug/doc_update
   message: Merge pull request #2100 from himanshug/doc_update doc update to make it easy to find how to do re-indexing or delta ingestion

github_issues:

github_issues_comments:

github_pulls:

1. **title:** doc update to make it easy to find how to do re-indexing or delta ingestion
   body: received this feedback from users that it was hard to find so making very explicit.

github_pulls_comments:

1. @fjy changed as per review comments.
2. @fjy made various changes to address all review comments, pls take another look. I have placed links for users to learn details about ingestion spec etc, this doc focuses on data updation only.
3. :+1:

github_pulls_reviews:

1. I think Re-indexing should be a completely different section in the ingestion docs with these explicit steps listed out
2. you mean adding another file batch-delta-ingestion.md and link it in "Ingestion" section in the TOC file ? But that new file will only say what is updated in "docs/content/ingestion/batch-ingestion.md " in this PR. is that enough or you are looking for something more?
3. i think we should add batch-delta-ingestion.md and link it from the TOC. The document can be short but we can move the contents around reingestion out of batch-ingestion or repeat the relevant parts
4. sure, will update soon.
5. How do you feel about calling this 'Updating Existing Data'?
6. How do you feel about giving this section a title 'Updating Existing Data'? And then we can explain updates in Druid are done by reindexing or rebuilding segments, and by delta ingestion. We can also mention that lookups provide a way to do updates on a small dimension table.
7. I think it is useful to say that updates are best done through batch ingestion, and this section will focus on Hadoop based batch ingestion.
8. I think examples of a full spec will be really helpful
9. let's just remove this
10. why is "delta ingestion" in quotes?
11. mention the common case of delayed events
12. Also I think this is a nice place to mention that updates can be an expensive process in Druid depending on what is done
13. changed
