Item 218
git_comments:

1. **comment:** TODO remove me after all test cases passed
   label: code-design
2. **comment:** TODO resume me after all test cases passed
   assertThat(SQL_CASES_LOADER.countAllSQLCases(),
   is(SQL_PARSER_TEST_CASES_REGISTRY.countAllSQLParserTestCases())); TODO remove me after
   all test cases passed
   label: code-design

git_commits:

1. **summary:** Fixes #4161 (#4162)
   message: Fixes #4161 (#4162) * Use same SQL cases for old parser test engine and new visitor parser
   test engine * remove SQL cases for visitor * remove useless VisitorSQLCasesLoader and
   VisitorSQLCasesRegistry
   label: code-design

github_issues:

1. **title:** Use same SQL cases for old parser test engine and new visitor parser test engine
   body: We have already split `SQL cases` and `assertion cases` for old parser test engine and new visitor
   parser test engine. It is make sense for split `assertion cases` because we need add new parse logic step by
   step. But we should remove `SQL cases` copy for visitor. Keep one `SQL cases` can reduce copy error.
