git_commits:

1. **summary:** Remove never implemented regex descriptions
   message: Remove never implemented regex descriptions #6164. The regex replacement was never implemented. Removing its documentation.
   label: documentation

github_issues:

1. **title:** header_rewrite regex replacement not implemented/not documented correctly
   body: The header_rewrite docs indicate that regex replacement should work as far back as I can find (https://docs.trafficserver.apache.org/en/4.2.x/reference/plugins/header_rewrite.en.html#values ... https://docs.trafficserver.apache.org/en/8.0.x/admin-guide/plugins/header_rewrite.en.html#header-values). But, there aren't examples on the page, and haven't been able to find an example that works. Eg ``` cond %{CLIENT-HEADER:Bar} /myvalueI(dont|wantto)capture)/ set-header Foo $0 ``` Should take the Bar: header with a value of "myvaluewanttocapture" and put something into a Foo header. But it doesn't. We should either: a) remove that section from the docs or b) find an example that works and include it.... then clarify how to use it.
2. **title:** header_rewrite regex replacement not implemented/not documented correctly

github_issues_comments:

1. I'm happy to make the doc changes for whichever outcome.
